

## ORGANIC FARMING – OPPORTUNITIES AND RESTRAINS IN THE CONTEXT OF SUSTAINABLE DEVELOPMENT

*Lecturer PhD. ANGELA ANDREICA<sup>1</sup>*

### **Abstract**

*Ecological agriculture represents an alternative to the conventional (traditional) agriculture, as a consequence of its inadequate function and also of the causes determining the diminution of plants resistance, of animal health, of soil quality and, implicitly, of human health. The authors of this paper have tried to grasp the evolution of Romanian ecological agriculture, by emphasizing both opportunities and constraints.*
