

THE ANALYSIS OF THE CORRELATION BETWEEN HUMAN CAPITAL AND SUSTAINABLE ECONOMIC GROWTH

Senior Lecturer PhD. Ștefania-Cristina CUREA¹

Abstract

Although the economists have studied the relationship between human capital and economic growth over several generations, there are still different opinions of how this relationship can be described in a formal model. This paper aims to develop a system of macroeconomic indicators, placed in the current economic context in our country, that would reflect the impact of education and professional development on sustainable economic growth.
