

THE IMPACT OF CLIMATE CHANGE ON SUSTAINABLE DEVELOPMENT

EMILIAN M. DOBRESCU¹

Abstract

The concept of sustainable development, launched in 1987, has evolved which could be summarized as follows: was accepted and transformed into strategic goals in the various national economies expanded at economic sectors in different areas (human resources, etc.) inspired action worldwide (UN), continental (EU) and regional, which were transformed into arrangements and agreements such as those related to: the protection of the ozone layer, reducing CO₂ emissions, management of hazardous substances, protection of natural habitats and so on, has been included in the education system at all levels, has tapped into the common language, polarizing the attention on the main challenges that confronts the current civilization. Between climate change and sustainable development is closely connected.
