### **Abstract**

*Forecasting the audited entities' performances in correlation with management typology (local or foreign) proves to be useful in terms of estimating the impact of a particular type of management of the audited entities upon indebtedness policies, the efficiency of using the shareholders' assets and capitals, and upon the contribution of revenues to strengthen the self-financing capacity. Establishing a mathematical model, tested on a stratified sample within a representative county at national level is able to provide credibility and relevance to the study's results.*
